Response to Arguments

12. Applicant's arguments filed 8/10/2005 have been fully considered but they are not persuasive.

In response to applicant's argument that the only second material Obayashi et al. discloses is an adhesive coating that may be an acrylic resin, an epoxy resin, or a petroleum resin, is not really part of the bonding tape and actually takes away from the welding effect of the bonding tape, the second material disclosed by Obayashi et al. is

Art Unit: 1745

part of the bonding tape, since it is an additional layer, and since the applicant claimed that a portion of the bonding tape includes a first and second thermoplastic material and furthermore, the term "portion" is not limited to a single layer but a part of or piece of the tape. As to the adhesive taking away from the welding effect, Obayashi et al. discloses that the adhesive *sometimes may* decrease the welding effect of the bonding tape however, does not maintain that it definitely takes away from the welding effect.

In response to applicant's argument that Gaylord Jr. does not disclose the use of a continuous thermoplastic tape that is capable of forming both an adhesive bond and a physical bond with a substrate, similarly Gaylord Jr. does not teach the presence of both adhesive bonding and physical bonding in a seam that joints two substrates using a continuous thermoplastic tape, Gaylord Jr. does disclose the presence of both adhesive bonding and physical bonding in a seam that joins two substrate using a continuous thermoplastic tape (col. 4 lines 39-41). Applicant defines adhesive bonding as bonding that results from attractive forces between two or more materials and physical bonding as physical intermingling of portions of the thermoplastic tape within the interstices of a substrate as a result of portions of the tape becoming relatively melt-flowable upon heating. Gaylord Jr. teaches that the segments are heated and pressed together to fuse the plastic layers together and thereby join the fabric panels (col. 4 lines 21-24). Therefore, the bonding of the plastic layers resulted from attractive forces as defined in adhesive bonding since the two plastic layers are adhered to each other. Furthermore, physical bonding occurred as defined by the applicant, wherein physical intermingling of portions of the thermoplastic tape within the interstices of a substrate as a result of

portions of the tape becoming relatively melt-flowable upon heating. Hence Gaylord Jr discloses both adhesive bonding and physical bonding of the two plastic layers.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
